

MELAMINE LAMINATED PLYWOOD

Promoting Green Ideas into Decor Panel

Melamine laminated plywood is a type of plywood that has a layer of melamine resin on its surface. Melamine resin is a hard plastic that can provide a smooth and durable finish for various applications of furniture and construction.

Melamine laminated plywood is different from melamine faced plywood, which has a thin layer of melamine paper on its surface. Melamine laminated plywood is also different from laminated plywood, which has a thicker layer of plastic resin that is cured under high pressure.
